ACADEMIC PROJECTS

- **Portfolio– Full Stack based Website**
  This is my personal portfolio showcasing professional and technical experience relevant to the IT industry.
  - **Client Side:** Designed using HTML, CSS, and JavaScript for responsive UI and user interaction.
  - **Server Side:** Implemented using Django and Python with Django models for dynamic content and SMTP for contact form functionality.
  - Link – https://harsha-032.github.io/Portfolio/

- **Crime Reporting Management System – DBMS based reporting system**
  A crime reporting portal where users can report crime incidents and access safety information.
  - **Client Side:** Built with HTML and CSS for user interface; includes login and signup forms.
  - **Server Side:** Django and Python manage database operations, user authentication, and data handling using SMTP for notifications.

- **Quality Testing – based on Machine Learning**
  A web-based system that tests wine quality using a Machine Learning algorithm (Naïve Bayes Classifier).
  - **Client Side:** Developed a user interface using HTML and CSS, with user login and signup functionality.
  - **Server Side:** Used Django and Python to manage model training, prediction, and dataset handling via Pandas.

HOBBIES

- Gym, Cooking, Anime, Volley ball, online games
